

Graduation & Your Three Paths

Nine modules built. Three ways to go deeper.

Gourav Shah · School of DevOps & AI · Lesson + Lab + Quiz

Nine modules ago, could you have answered this?

You can answer the question Module 1 opened with

is that machine learning, a language model, or an agent?

nine modules ago

~~it depends?~~

machine learning

learns patterns from data

Modules 3, 4

a language model

predicts the next word

Modules 1, 5

an agent

reasons in steps, calls tools

Module 6

you can name all three now, and say what each one does

Machine learning, language model, or agent?

Five projects, one thread

A predictor turns old rows into tomorrow's number

same shape at work: demand forecasting · churn scoring

Module 3 — past sales in, one number out

A classifier works out for itself what to look at

same shape at work: image recognition · fraud flagging

Module 4 — messy input in, a name out

One call in, a written answer out

same shape at work: every AI helper bolted onto a product

Modules 1 and 5 — your first real LLM call

An agent picks its own next step

Module 6 — it reasons, then reaches for a tool

A team ships the box, not the model inside it

Modules 7 to 9 — three pieces, one door in

Three converged. Two stayed standalone, on purpose

a house-price model inside a chat assistant would be a fake link

Both answers are honest ones

Check what stuck

Thirty questions, and every answer explained

AI Foundations Check

30

questions

every module, M1 to here
each answer explained

course reference card

key terms from every module
open it on the next vendor call

a mark gives you a score; an explanation tells you what to read again

Today's lab, plus a card you keep

Same rotation, three specializations

A rotation does not make you a specialist

It shows you which one you want to go deep on

Each path picks up something you already built

AI & ML Foundations

the five projects
you just built

One course in, three ways on

Each path picks up something you already built

One course in, three ways on

Each path picks up something you already built

One course in, three ways on

Each path picks up something you already built

One course in, three ways on

MLOps: the world moves, the model does not

Module 8's retail case — two quiet months

LLMOps: no weights to train, so the prompt is what you control

Module 8's chatbot case — one edit, a dozen breaks

Agentic DevOps: watch the loop, not just the answer

Module 8's ops case — two calls became nine

Picking a path is picking where you go deep first

pick where you go deep first, not the only thing you will ever need

Your own capstone already needs all three

Where to go from here

Two honest ways to leave this course

the Frontier track

new engineering disciplines

the agent tooling ecosystem

agentic IDEs

ends in its own path-picking lab

or go straight to a path

MLOps Bootcamp — from Modules 3, 4

LLMOps — from Module 5

Agentic DevOps — from Module 6

each picks up where its module stopped

If you already know, go. If you do not, Frontier helps you decide.

Decide now, or take Frontier and decide there

MODULE 10 TAKEAWAYS

You can name the work now, and say which part you want

- 1 five projects, five real jobs
- 2 three disciplines, named
- 3 one path to pick next
