

Your Three Paths — MLOps, LLMOps & Agentic DevOps

Nine modules done. One choice ahead.

Gourav Shah · School of DevOps & AI · Lesson + Lab + Quiz

What do you want to be good at a year from now?

You built four real things — today you pick where to go deep

four labs, one assistant, three ways forward

Three courses pick up exactly where this one stops

none of them re-teach the last nine modules

Three engineers, three different pages

Same training, three different reasons to get called in

same foundations, six months apart

The model never crashed – it drifted

uptime was green for two weeks

The model was fine — the page it read was months old

the weights never changed

The reasoning was right — nothing stopped the action

the gap is permission, not intelligence

Three different breaks means three different jobs

not three labels — three kinds of work

The three paths, side by side

MLOps: you own the model and the data behind it

build the pipeline Module 8 only drew

LLMOps: you own the prompt, the context, and the cost

builds most on Modules 5, 6, 7 and 8

the weights are someone else's; the rest is yours

Agentic DevOps: you own what an agent may do on its own

builds most on Module 6, Module 8, and the Agent Ecosystem

not *can* it — is it allowed to

Nothing in this table ranks the three

	MLOps	LLMOps	Agentic DevOps
what breaks	the model quietly gets less accurate over time	context or a prompt edit makes answers wrong	an agent acts when nobody approved it
what you own	data pipelines, model registry, retraining	prompt versions, evals, RAG freshness, cost	tool governance, loop tracing, human gates
builds most on	Modules 3, 4, 7, 8	Modules 5, 6, 7, 8	M6, M8, Agent Ecosystem

no column here is better than the other two

read across the row you recognise

Which question did you want answered?

read all three out loud — one of them is already yours

one of these is already the one you ask

Where this course's spine points from here

One assistant, three ways to go deeper

every arrow starts from something you built

One assistant, three ways to go deeper

every arrow starts from something you built

One assistant, three ways to go deeper

every arrow starts from something you built

One assistant, three ways to go deeper

every arrow starts from something you built

One assistant, three ways to go deeper

every arrow starts from something you built

No path throws away what you built

no path hands you a blank page — each one picks a block

each one picks one part and goes deeper

Choosing now doesn't lock you in

A path is a starting point, not a contract

real systems rarely stay inside one row

Pick the one you have an honest reason for

~~the path that sounds
the most in demand~~

the one you can give a real reason for

not a repeat of foundations you have already done

not a jump past basics you still need

there is no answer key on this one
