

The Wire Under the AI Map

What's sent, what it costs, what triggers an agent

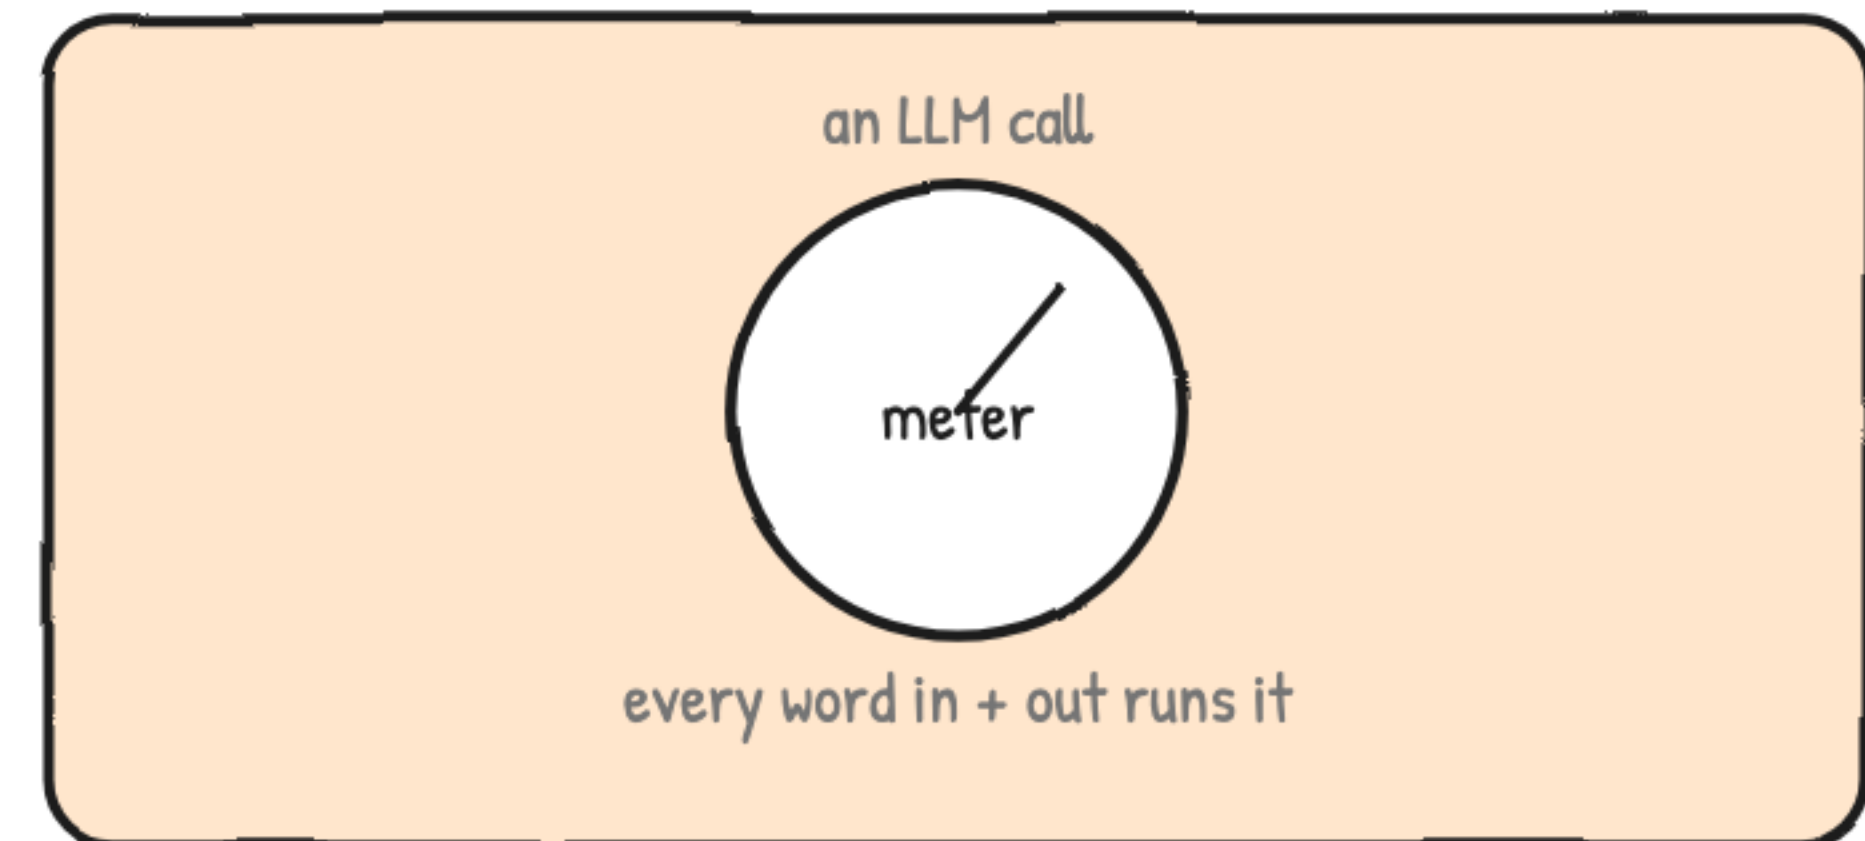

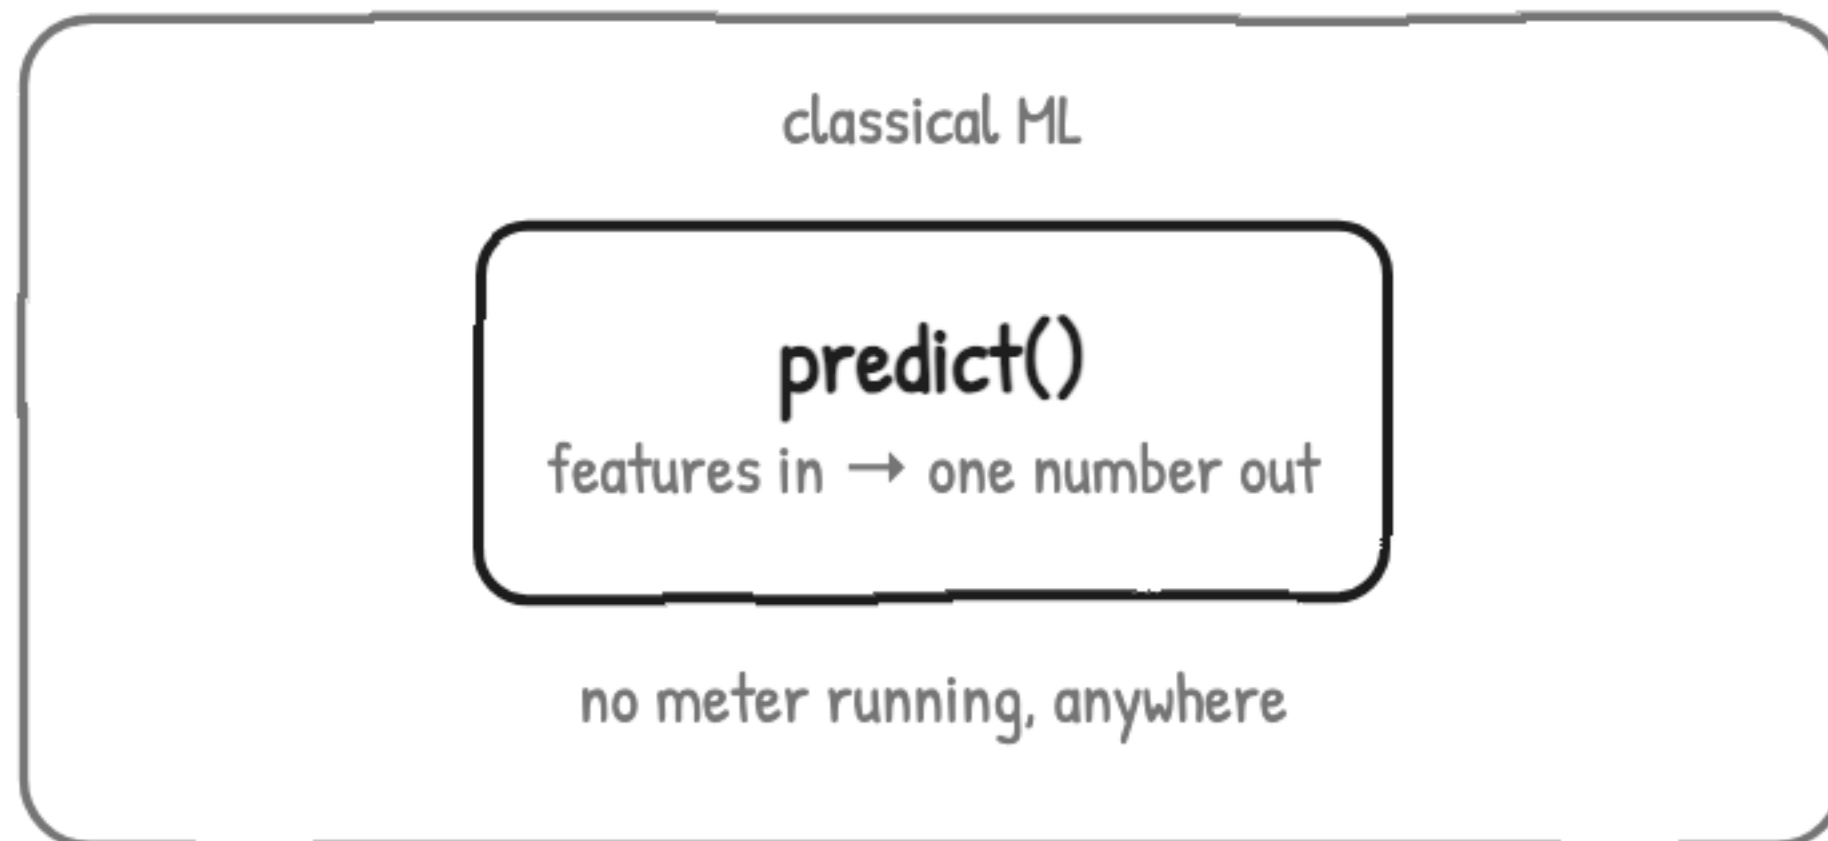

Gourav Shah · School of DevOps & AI · Deep Dive (Part 2)

Every provider drives the same paved road

One JSON contract, five different vans

The ML region never needed a meter; the LLM region always does

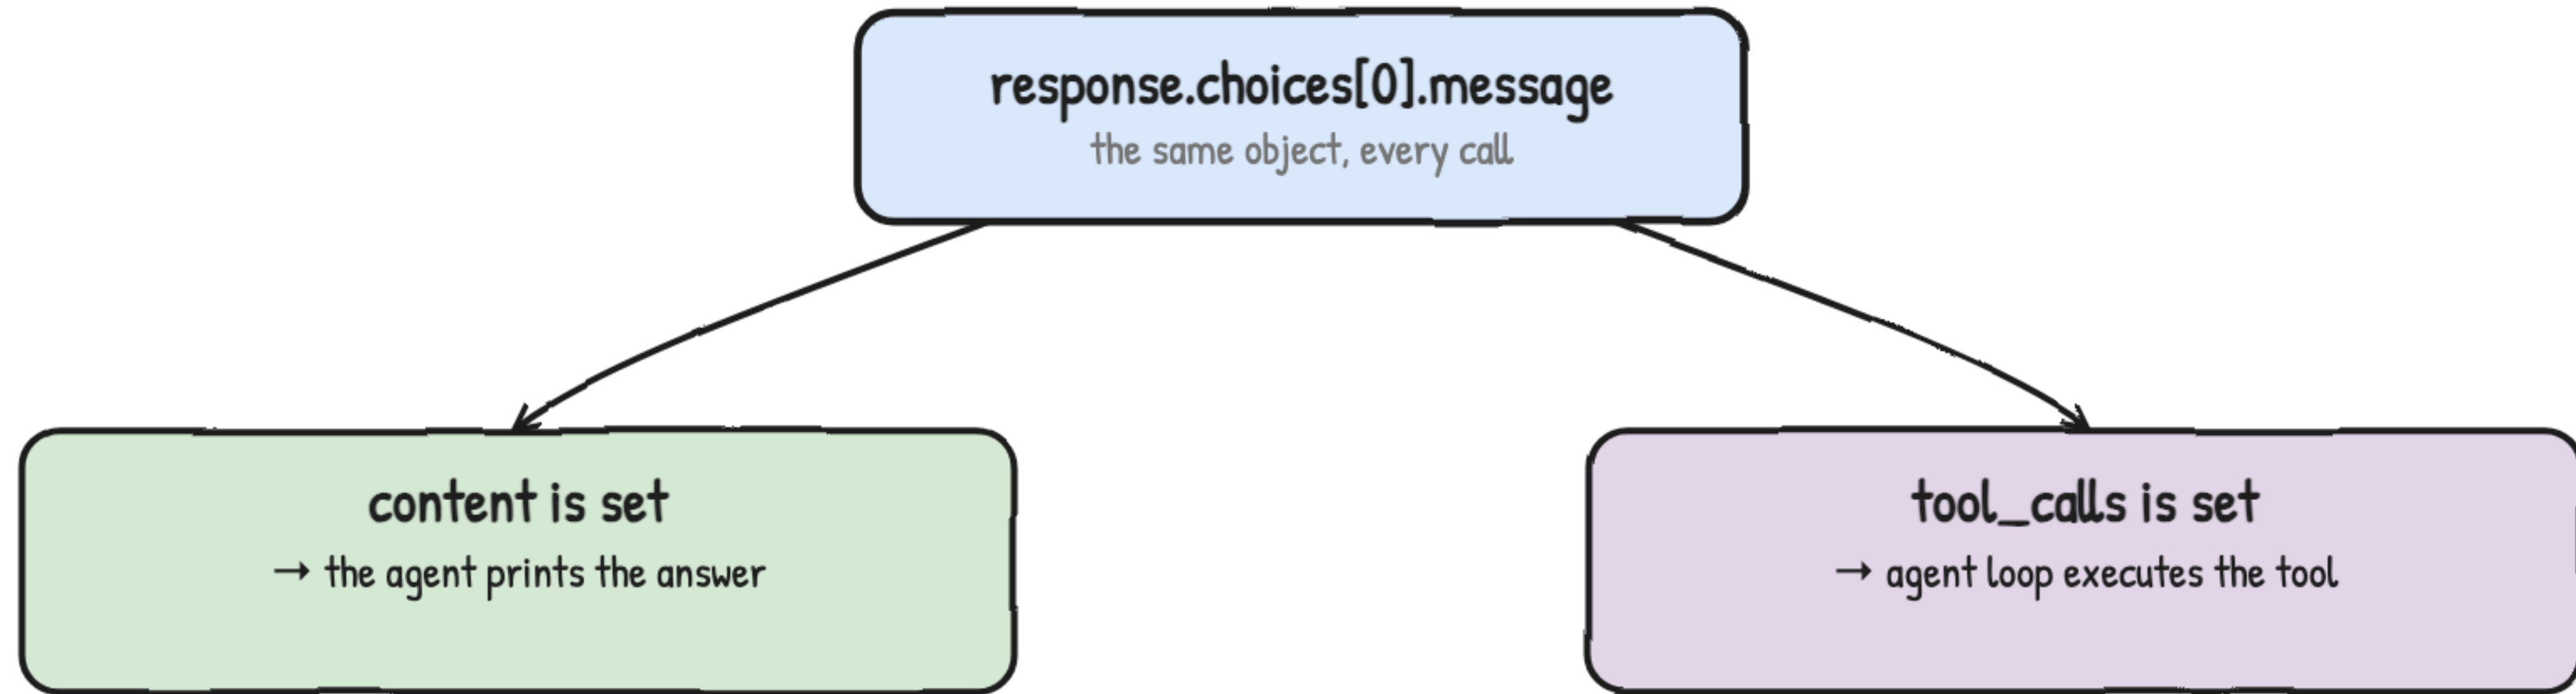

Compute you own vs. cost per call

Three numbers are the only ground truth for a call's cost

prompt, completion, total

One field is the entire seam between answering and acting

Same message object, different payload field

Now: curl the wire, print the meter, watch the hook

1

curl the endpoint directly → see the raw JSON

2

print r.usage → see the three numbers

3

read the tools request shape → see where tool_calls populates

labs/m1 — live now

Same script, read more closely

Now open a terminal in **labs/m1**. • Gourav Shah • School of DevOps & AI
