

Under the Hood of the Lexicon

Three questions the terminal is about to answer

Gourav Shah · School of DevOps & AI · Deep Dive (Part 2)

A tokenizer's vocabulary is a warehouse of pre-cut blocks

Longest match first, then fall back to something smaller

"Similar" is a distance you can calculate, not a judgment

Cosine similarity is the angle between two points

The context window is a desk, not a filing cabinet

Everything for this answer has to fit at once

Now: run the three scripts, watch the numbers move

- 1 `tokenize_demo.py` — watch words chop differently
- 2 `embeddings_demo.py` — watch the angle shrink and grow
- 3 `context_budget.py` — watch the headroom shrink

labs/m2 — live now

Same three ideas — proven live, not just drawn
